

# INSTALLATION GUIDE

## Front Plate Mount for 2024 Subaru Outback Wilderness

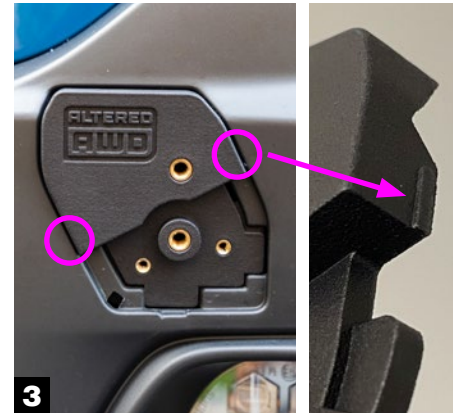

**1** Remove the towing connector cover from the driver side on the front bumper.

**2** Insert the first part of the license plate mount at this particular angle and then rotate it up vertically as shown above (red arrow).

*NOTE\*\*\* In pink, there is a small notch on the inside of this flange on the bumper. The license plate mount has a notch cut out that allows you to pivot it around this and seat it in the bumper opening.*

**3** Apply some pressure to the top of the mount and it will seat into place in the bumper opening. There are small snap "tabs" on the sides that help it seat itself.

**4** Next, place the locking plate (the smaller 3D printed piece) in place and use the smaller screws and the supplied hex wrench to secure it to the larger printed part. This locks it to your bumper.

**5** Using the two larger hex head bolts and washers, connect the license plate bracket to the bumper mount. Make sure bracket is mounted inward towards the center of the bumper.

**6** Finally, attach your license plate with the screws that are supplied with the license plate bracket.

\*\*\*Don't forget to get your AlteredAWD Front License Plate Delete Plate.

**Please keep the two hex wrenches and the Torx wrench from the license plate bracket in your car, so you have them on hand.**
